Save Money On Medical Expenses, Absences, And Lagging Production Caused By Workplace Injuries!

Improving workplace safety pays. You may be spending too much on medical payouts and workers' compensation—not to mention such hidden profit-leaks as lost time, lost efficiency, replacement training expenses, damage to tools and equipment, and, above all, failure to fill orders.

Your foremen and supervisors know what your employees should do—and not do—to work safely. Organizing and communicating this knowledge is something else, however. That's why the Business Research Publications editors have published SAFETY TALKS, a way you can help your foremen plan and execute a safety program that works for your company. The TALKS may be reproduced for in-plant distribution.

SAFETY TALKS: A COMPLETE PROGRAM OF FIVE-MINUTE TALKS TO PROMOTE SAFETY is specifically designed to help your front-line supervisors teach your employees how to do their jobs safely. The manual is divided into 24 major topics with 291 separate talks.
